Review	
Review	<p>The paper discusses an empirical study to determine the correlation between incentives factors and talent innovation. The study was performed with professionals of creative companies from Jiangsu province.</p> <p>Overall, I had difficult to understand the paper... The english language needs significant improvement grammatically and structurally (the chaining of ideas is confusing mainly in the two first section and conclusion - by the way, the conclusion section title is misspelled). There are errors in the format used in the citation (it is not superscripted).</p> <p>I felt that some parts deserved further explanation (in Introduction section for example, what the authors mean by "the traditional sense of talent"? is it a universal concept or restricted to a country for example?</p> <p>I also missed further explanation about some methodological features of the study. A reference for a link with the questions would be great to get a better sense of the study. Also, why the authors opted for a quantitative study instead of a qualitative one? I understand the intention of discovering if there is or not a statistical correlation between the analyzed variables. But why that would be more important than, for example, trying to understand the way that incentive factors are applied in practice in the context of the companies analyzed, or the practical factor that favors or disturb them?</p> <p>Finally, I think this paper doesn't fit well the topics of the conference. I suggest the authors to try to improve the paper taking the reviews into consideration, improve the written and try a venue more close-related to their topic.</p>
